

(a) Sharing the column
doubled popup's gain

(b) Opposite signs:
signal helps one, hurts other

What separates them

popup coverage 0.81
three paths: road address 43,
district 25, city 4

market popup coverage 0.43
one path only: road address 107
(no record files -> no city/district)

With 57% of rows masked out, the
missing block acts as an indicator,
not as information.

The placebo proves it: shuffling the
values makes market popup BETTER
(-0.023 -> +0.015).
